

WATERPROOF ENVIRONMENTAL POLICY

The company should work to actively improve the environment by;

- Preferably use environmentally adapted materials.
- When not yet possible, aim for a quality level so that the product life cycle becomes longest possible thus indirectly reducing the environmental impact.
- Participate in systems to limit environmental impact and recycling of products and packaging.
- Educate and motivate staff and customers to carry out their tasks in an environmentally and responsibly manner.
- Cooperate with suppliers, customers, authorities and other stakeholders in order to continuously reduce the environmental impact of the business.
- Work to ensure that the production that takes place at subcontractors meets high demands both regarding staff and the total environmental impact.
- Participate in various environmental improvement projects such as White Flag International with its "Aqua Day", a day when divers all over the world pick garbage from the various oceans.
- A total commitment to protect the environment and prevent pollution according to current laws and other requirements.

GOALS

The company should always and overall work to limit and gradually reduce our environmental impact in all areas and;

- Aim to be a "non-plastic company" and use this in our marketing. Rice paper bags can nowadays be made with windows and thus replace the inner bags of plastic.
- Be constantly attentive and interested in improving both the environment and our environmental policy.
- Aim to live up to all requirements in ISO 14004:2016 even without the official certification.
- Document all measures that are taken in the environmental area so that we can live up to its requirements and apply the idea of continuous improvements.
